TECHNICAL DATA SHEET PC 400LC

MATERIAL DESCRIPTION

PC 400LC coating is a radiation-curable acrylate useful for a large area anti-reflection (AR) coatings, especially has strong adhesion to glass and PET film for unique long term reliability. PC 400LC coating has suitable glass transition temperature, rapid cure property, non- yellowing, thermal resistance, high oxidative and hydrolytic (moisture) stability, which are required by optical film industry applications.

CURING CONDITION

Minimum UV dose of PC 400LC for complete cure is $1,000 \text{ mJ/cm}^2$ under a nitrogen environment. However, the minimum dosage is dependent upon the thickness of the PC layer.

STORAGE CONDITION

PC 400LC polymer cladding coating can polymerize under improper storage conditions. Store materials away from direct sunlight and presence of oxidizing agents and free radicals. Storage temperature range is between 15° to 27° .
